

Group #5:

Demo

- 1st sprint index + search
 - Backend using java servlets can currently only handle 1 req.
 - Some user functionality implemented on backend (using Mongo for storage)
 - Indexing is pretty beta at this point still needs some work
 - File uploader is functional
- 2nd sprint frontend + upload files
 - File uploader (WebUI) is pretty clunky for now, proper routes not yet impl.
 - Styling looks pretty good,
 - Seemed to have a good build process, possible minor tweaks needed

JIRA

- Sprint 2 burndown chart looks reasonable, linear burndown to completion
- Sprint 3 = users for first 1-2 days, looks fine but if extends past this then group could fall behind
- Rest of Sprint 3 planning still IPR, seems like Users + Permissions, courses, and more advanced indexing + some (RESTful?) API tweaks will be tackled in next 2-3 sprints.

Overall team seems to be on track*

Grade: 10/10
