Group #5:

Demo Notes:
- file preview implemented on front-end (& pdf-file prev. for user's own uploaded docs), functional front-end, could use more polishing.
- App deployed on heroku (over https)
- Still have to do crawler, post-search filtering
  - Based on current implementation - not much work to impl.

Comments / Feedback

Group was quickly able to demo MVP, as long as they keep polishing / working on stretch goals they should have a solid project to present in the next few weeks.
